

Black Rhodium

Fusion Mains Power Cable

Fusion is a power cable that features the low impedance cable and high quality connectors.

The Fusion is the ideal choice for any low to middle end system due to the following advanced production techniques employed by Black Rhodium in the manufacture of the cable:

- ✓ Silicone rubber insulation, which offers low dielectric loss, reducing time smearing effects. This enables accurate portrayal of the attack of leading edges, as well as the natural decays in music.
- ✓ 3 core 1.3mm² 16 gauge silver plated copper conductor wires, with 14Ω resistance per KM, insulated in silicone rubber to UK power cable colour codes, ensuring that your cable is safe to use, whilst also offering powerful, cleaner renditions of audio and visual from low frequencies, through to the very highest.
- ✓ Advanced quality control of the wire direction in the manufacturing process to ensure consistent superior stereo imaging and low background noise.
- ✓ Exclusive post production process proven to deliver improved sound and picture quality.
- ✓ Cable manufactured in England, ensuring that we have close, face-to-face contact with the manufacturing and production facilities, and also shows that we support and are proud of British manufacturing.
- ✓ Fitted with high quality connectors chosen by Black Rhodium for a high quality performance
- ✓ Attractive yellow sheath to ensure that the Fusion is a cable that you can be proud to own.
- ✓ Available with UK, European Schuko or USA terminations, IEC or 2 pin figure of 8, as well as 4 way trailing lead terminations on UK versions.
