

Black Rhodium

Illusion DCT

This cable will enhance your system, through the technology applied by Black Rhodium, such as the following:

- ✓ Using tightly twisted, silver plated solid core cable, which offers a much clearer sound than stranded copper, especially over mid-high frequencies, as well as being low noise, improving sound quality.
- ✓ Utilising high quality PTFE insulation with an exclusive post production process which allows for a faster, clearer beat and a smoother sound, less prone to harshness.
- ✓ Utilises the acclaimed Eichmann Bullet Plugs, which due to their single point return contact and 24k gold plating, this improves the clarity and cleanliness of sound.
- ✓ Deep Cryogenic Treatment, which we have found through extensive testing improves both the timing and clarity of sound, thus allowing the listener greater appreciation of the sounds being played.
- ✓ Advanced quality control of the direction of wiring during the production process, delivering superior stereo imaging, as well as lower background noise. Directional heatshrinks are attached to ensure that these benefits are easily achievable.

"Detail positively shines through and image is good, depth excellent and tonality very neutral."
