

Black Rhodium

Jazz Mains Power Cable

The Jazz is a power cable that features the low impedance cable and high quality connectors.

The Jazz is the ideal choice for middle to high end systems due to the following advanced production techniques employed by Black Rhodium in the manufacture of the cable:

- ✓ Silicone rubber insulation, which offers low dielectric loss, reducing time smearing effects. This enables accurate portrayal of the attack of leading edges, as well as the natural decays in music.
- ✓ 3 core 3mm² 13 gauge silver plated copper conductor wires, with 6Ω resistance per KM, insulated in silicone rubber to UK power cable colour codes, ensuring that your cable is safe to use, whilst also offering powerful, cleaner renditions of audio and visual from low frequencies, through to the very highest.
- ✓ Advanced quality control of the wire direction in the manufacturing process to ensure consistent superior stereo imaging and low background noise.
- ✓ Exclusive post production process proven to deliver improved sound and visual quality.
- ✓ Cable manufactured in England, ensuring that we have close, face-to-face contact with the manufacturing and production facilities, and also shows that we support and are proud of British manufacturing.
- ✓ Fitted with high quality mains connectors chosen by Black Rhodium for their superior performance
- ✓ Attractive blue sheath to ensure that the Jazz is a cable that you can be proud to own.
- ✓ Available with UK, European Schuko or USA terminations, as well as 4 way trailing lead terminations on UK versions.
