

Black Rhodium

Rondo

Black Rhodium Rondo is a mid range digital interconnect, designed in mind for ultra low loss and noise applications, with ultra superior RFI rejection.

Rondo benefits from the following processes:

- ✓ 75Ω digital cable, for ultra low loss, and specially designed for video applications.
- ✓ High quality PTFE inner insulation with an exclusive post production process which allows for a faster, clearer beat and a smoother sound, less prone to harshness.
- ✓ Special conducting layer between insulation and screen that prevents microphonic noise, resulting in a smoother, clearer and more dynamic sound quality.
- ✓ Advanced quality control of the direction of wiring during the production process, delivering superior stereo imaging, as well as lower background noise.
- ✓ Terminated with our own high quality hourglass silhouette gold plated RCA Phono plug, ensuring cable is much easier to insert and remove from your system, and performance and reliability of cable is maintained over time due to the design.
- ✓ Cable manufactured in England, ensuring that we have close, face-to-face contact with the manufacturing and production facilities, and also shows that we support and are proud of British manufacturing.

"There's no shortage of detail, and the Rondo is capable of subtle atmospherics."
